Von Ruden Achieves Premier Positioning with Mori Seiki as Peripherals Designer/Supplier.

MSQP approval from Mori Seiki USA was completed in July of 2009.

(November 11, 2009, Buffalo, MN)
Every product that works with a Mori Seiki machine – whether it's a machining center, lathe or multi-axis machine – needs to work at the peak of performance. That is why Mori Seiki created the Mori Seiki Qualified Peripherals program. The MSQP program identifies suppliers that offer qualified products that meet their standards for performance. These peripherals comply with Mori Seiki's two-year new machine warranty and offer their customers single-source support.

According to Brandon Anderson, Von Ruden VP, "We are proud to be Mori Seiki's only 'Made in USA' MSQP approved source for driven tooling. Our Minnesota manufacturing facility helps assure customers that support, service and repair for our Mori Seiki driven tooling will always be extremely efficient."

For more information on Driven Tooling for Mori Seiki machine tools, go to www.vonruden.com or call Von Ruden Manufacturing at 763.682.3122
